# THE TERPENES

VOLUME TWO

*The Dicyclic Terpenes, Sesquiterpenes, and their Derivatives*

By J. L. SIMONSEN

Demy 8vo. 35s. net

Few plant products are of greater interest and importance than the dicyclic terpenes and the sesquiterpenes. In the first section of this volume a detailed account is given of the chemistry of the dicyclic hydrocarbons and ketones, including the key substances,  $\alpha$ -pinene and camphor, and, as in Vol. I (25s. net), special attention has been given to structural problems. The second section deals with the sesquiterpenes, and for the first time a full discussion is available of the extensive researches of Ruzicka and his co-workers in this field

# Before DEMAND EXCEEDS SUPPLY

In response to our last announcement, some early advance orders have already been received for experimental animals.

But the response so far is not likely to forestall completely the shortage of good experimental rats that inevitably occurs in the autumn and winter.

Whether for young experimental animals or adult breeding stock, all orders must be treated in strict rotation. The London strain of Wistar Albino Rat—available exclusively at the Glaxo Research Laboratories—is in world-wide demand.

We are anxious that there should be no disappointment this year. Biochemists should in their own interests, respond quickly to this announcement. If particulars and terms are required before ordering, please write at once. Special discounts are in force for supplying quantities of a dozen or more to research workers at Universities and Research Institutes.
